

Allestree. 1620.

10

A New Almanack, or annu-
all Calender, with a compendious
Prognostication thereunto appen-
ding, serving for this yeare of
our Lord, 1620.

Being Bissextile or leape yeare.

Calculated and properly refer-
red, to the longitude and sublimitie of
the Pole Articke of the famous towne of
Derby: & may serve generally, for the most
part of Great Britaine.

Made and written according to the full
Art, by Richard Allestree, Practi-
tioner in Sidera Scientia,
& peractio.

Sine te nihil auxilij, nihil est opis, & Deus omnia.

The secret things belong to the Lord our God, but the
things revealed belong vnto vs, and to our children
for ever. Deut. 29. 29.

Cambridge.

THE HISTORY OF THE

REIGN OF KING CHARLES THE FIRST

BY SAMUEL JOHNSON

IN TWO VOLUMES

LONDON: Printed by A. MILLAR, in Pall-mall; and by J. DODD, in St. John's Street, 1742.

THE SECOND VOLUME

CONTAINING THE HISTORY OF THE REIGN OF KING CHARLES THE FIRST, FROM THE DEATH OF KING CHARLES THE FIRST, TO THE DEATH OF KING CHARLES THE SECOND.

Vulgar Notes of the moouable | **The New Accompt vsed beyond**
Fests vsed in England. | **the Seas.**

Whitunday	June 4	Pentecoste	Maivs 28
Aduent Sunday	December 3	Aduentus Dō.	Iunivs 7
			Novem. 29

From the Nativity of Christ and Chronetide, 9 weeks and one day.

Since his Majestyes Coronation in Scotl. 29 July. 54
 Since his happy coming to London 7 May 18

In the first Coluime of this my Almanack, toward the right hand, you haue the hour and minute of the Sun rising, for every day in the year, Psal. 104, 22. which houres and minutes, are halfe the length of the same night: for example, the 8. of Januaries, the sunne riseth at 8. a clocke, which being doubled maketh 16. houres & no min. the length of that night. And to knowe the time of the sun setting thorough the yeare, take the houres & minutes found in the Almanacke for sun rising, from 12. and you shall haue the sun setting lesse: which being doubled is the length of the day. For example, Jan. the 8. day, the sun riseth at 8. and no min. take 8. from 12. and there resteth 4. the houre of sun-set that day, 4. being doubled, maketh 8. houres, the length of that day, & so of all the rest: this is very easie.

**A perfect Table of the foure Tearmes and their
Returns, with the Eſſoyne dayes, dayes of Exception, Re-
turne Breuium, dayes of apparence
ſitting this year, 1620.**

Hillary tearme begins Ianu. 24. ends Febr. 12

egges.*

Pisces the feet

*♈ Aries & ♉ Taurus ♊ Gemini ♋ Cancer ♌ Leo ♍
Virgo ♎ Libra ♏ Scorpio ♐ Sagittarius ♑ Capricorn
♒ Aquarius ♓ Pisces.*

**The parts of mans body, which the Planets
doe signifie of themselves.**

Saturnus	Jupiter.	Mars.	Sol
Spleene, Right Ear, Bladder, and Bones,	Lungs, Ribs Liver, Gri- bles, Seede, Arteries.	Gall, reynes, Left eare, Veines, and Stones.	Sight, Heart, right side, mar- row, sinewes, & right eye viri
Venus	Mercurius	Luna.	♂ et ♀.
Liver, Kid- nies, sperme, fatnesse, but- tocks, geni- tals, matrice, pappes, and thoate.	Memory, Tongue, Hands, phantasie, Mouth, Sinewes, And Thannes	Left eye viri, right mulieris Stomacke, Left side, Brest, Umb-pon, and Thalle.	The secrets of both sex.

**The five Aspects of the Planets, with their Chara-
cters, and the definition of them.**

1. **The Coniunction** is, when two plannets are both in one selfe-sign, and one selfe-degree: which Aspect in Greeke, is called Synodos, and is marked thus ζ .

2. **The Sextile Aspect**, is, when two planets are distant one from another, betweene the centres of their own houses, by a sixth part of the Zodiacke: that is to say, by two whole signes, or 60. degrees, which Aspect is call'd in Greeke Exagonos, and is marked thus \ast .

3. **The Quadrate Aspect**, is when two plannets are distant the one from the other three whole signes, or 90 Degrees of the Zodiacke: and is called in Greeke Tetragonos, and is marked thus \square .

4. The Trine Aspect, is when two planets are distant the one from the other by foure whole signes, or 120. degrees of the Zodiacke, and is called in Greeke Trigonos, & is marked thus \triangle .

5. The Opposition, is when two planets are right opposite the one to the other and are distant the one from the other by six whole signes, or 180. degrees of the Zodiacke, and is called in Greeke Diametros, marked thus \oslash .

The 12. Signes are thus charractered	{	Aries.	Taurus.	Gemini	Cancer.	Leo.	Virgo
		γ	β	Π	δ	Ω	η
		Libra.	Scorpio	Sagittar.	Capric.	Aquar.	Pisces
		ζ	ν	τ	\wp	\equiv	χ

The Planets thus	{	Saturne.	Jupiter.	Mars.	Sun.	Venus.	Mercurie
		σ	μ	$\♂$	\odot	$\♀$	\mercury
		Moone.	Draggons head.	Draggons tail.			
		Ω	\cap	\cup			

The Aspects thus.	{	Coniunction.	Sextile.	Quartile.	Trine.	Opposition
		\circ	\ast	\square	\triangle	\oslash

Memorandum, that the golden Planet Venus is Occidentall, or our glittering Evening Starre, setting after the going downe of the Sunne, and thereof termed $\epsilon\omicron\pi\pi\epsilon\omicron\varsigma$ vel vespereus, that is the Evening Starre, from the beginning of this yeare 1622 till the sixteenth day of September, but then beginning to be Oriental, she becommeth our bright morning Starre before sunne-rising, and thereof called Lucifer, during the residue of this yeare.

Januarie hath xxxi. dayes.

2. quarter. the 2. da. 18 minutes past 8. at night.
 Full moone the 9. day, 21. minutes past 1. after midday.
 Last quarter the 16 day, 51 minutes before high noone.
 New moone, the 24. da. 14. mi. past 4. in the afternoon.

Euphemismus, or boni omnis captatio.

The Winter quarter, ☉ in ♄ and ♋.

The Hyemall Solsticall, or Winter quarter, being the first quarter Astronomicall, entered the last yeare 1611 the 14. day of December (more naturally about the midst of November) late in the afternoon: at what time the Sunne entered into the first minute of the Imaginary signe Capricorne, at which time the dayes be at the shortest: In this time ratnes and moistures doe increase, then meates and drinckes naturally would be vsed very hot with moderation also to drinke moderately wine without alay.

Of the Spring, ☉ in ♈ and ♌.

The tenth day of March about 3. a clocke in the morning, be- ginneth Aequinoctium vernum, at what time dayes and nightes berne equall in houres. (the Spring time more naturally and truly beginneth the 8. day of February) Swete flegme and blood doe increase: therefore vse meates and drinckes hauing good succ and sharpe: exercise the body diligently Galen in Com. Aph. 18. lib. 1. I say, meate would be taken lesse in quantitie now then in winter, and drinke some what more.

Summer quarter, ☉ in ♋ and ♌.

Summer, according to the rules of Astronomy, taketh his beginning this yeere the 11. of Iune about 7. a clocke in the morning: at what time, the declining Sunne is mounted to the highest poine of his Accedent, (or it beginneth more truly and naturally in May) being then nearest to our Zenith, or verticall point, producing the dayes here with vs vnto the longest, and nightes vnto the shortest: hauing his first ingress into the first Imaginary signe Cancer: this quarter the inward heat is but little, and the stomacke doth not digest so strongly, nor quickly.

A Prosthstitution

As in winter, wherefore in this season, eating often and a little at once, is most convenient.

Autumne or Haruest, @ in α m and γ .

The Sunne comming to the Autumnall Equinoctiall point, or degree of the imagined signe Libra, beginning our second Spring or Autumne quarter, making againe the dayes and nightes of equall length, beginneth the 13. day of September, about 9, a clocke at night, (or more naturally about the midst of August) this season of the yeare is variable, and the ayre changeable by nature, by occasion wherof, commeth sundry sicknesses, blood decreaseth, and melancholly aboundeth: wherefore all Summer fruits would then be eschewed, for as much as they make ill succ, and windes in the body.

Astronomicall calculations for this present yeere 1620.

The true or apparant greatnesse, of the Tropicall yeare, is 365, dayes, 5, houres, 55, scruples, 35, seconds. And in this time the Sunne doth finish his course through the 12. signes of the Zodiague.

A day large or Naturall, is 24, houres long, and this is the length of our Sabbath or Lords day, Gen. 2, 2. Leuit 23, 22, consider these places also, Dan. 8, 14. and Paul in Greeke calleth it Νυκτεμειρα , a Night day, that is, a day comprehending the night also, 2. Cor. II. 25.

A day strict or chuell, is 12, houres long, Iohn, II. 9. Saturne is retrograde from the beginning of the yeere, unto the 7. day of February, from that time direct unto the 7. of October: hee is retrograde againe after that time, unto the end of the yeere.

Jupiter goeth retrograde, from the 29. day of August, to the end of the yeare.

Mars is direct all this yeere.

Venus is retrograde from the 29. of August, unto the 7. day of October, all the rest of the yeere direct, Mercury is hindered

with his retrograde motion, { 1. From 16. of Ianu. to the 8. of Feb.

{ 2. From 11. of May, to the 3. of Iune.

{ 3. From 27. of Aug. to the 27. of Sep.

Extra hæc tempora libere iuxta signorum, ordinem promouetur.

The

Allestree. 1620.

The greatest Excentricity, or farthest point from the Centre of the earth: of the Sunne and all the Planets, and this point is named in the Arabick tongue Aux. in Greeke *Αυξισιον*, in Latine *Abis summa*, and in our English tongue Auge.

After Copernicus.

		gr. mi. se.				
That is to say the Auge	{	Saturni,	29. 47. 3. 47.	}	of {	Sagittarie.
		Iouis,	7. 4. 44. 38.			Libra.
		Martis,	18. 58. 13. 29.			Leo.
		Solis,	10. 6. 30. 8.			Cancer.
		Veneris,	16. 37. 34. 20.			Gemini.
		Mercurij,	0. 53. 15. 2.			Sagittarie.

You have both the Auge, and the opposite Auge of the Moon, throughout the yeere in every moneth, with two wordes, Apog. and Perig. n. gen. And this I have done for thee (curious Reader) to shew thee the vulgar errors, that many both write and speake. And heere you must know further, that the Sunne and Moone hath three motions, as flow, being in their Auge, or greatest Eccentricitie: and when the Sunne is in this point, hee goeth according to the Prutenicke tables, 0. gr. 56, minutes, 46. seconds, in 24 houres, and sometime 57, minutes, 18, seconds (wisest), being in Latine *Abis ima*, in his lowest point, or opposite Auge: (that is nearest the earth) and then may goe one degree, one minute, and 43. seconds, in 24. houres: and his meane motion, at what time he goeth 59, minutes: and 8, seconds in 24. houres, by occasion whereof diuerse things fall forth contrary to that the vulgar thinke and take it. 1. That the Sunne goeth as fast one day as another. 2. That the Sunne getteth as much in rising and setting one day, as it doth another. 3. That the dayes doe lengthen and shorten one houre every 15. day through the yeere, which is false: indeed from the 10. of March, vnto about the midst of Aprill, and from the 11. of September vnto the 25. of October, that portion is true. (and so likewise about a moneth before both the Equinoxial) but in the two Solsticials, the 12. of Iune, and 11. of December, in 9. dayes getteth and shortneth not about 23 minutes, in the latitude of 52. degrees, and 55. minutes. Fourthly, that there is more dayes by about 7, or 8, from the Equinoctiall of March, vnto the Equinoctiall of September, then there is

A Prognostication

from the Aequinoctiall of September, to the Aequinoctiall of March, which is not true.

Likewise the vulgar erre in the course of the Moone, because they consider not her Age, her opposite Age, and her mean motion, being in her Age, shee goeth 5. Degrees one minute, 50. seconds, in 24. houres: and then she goeth her swiftest motion, in her Apog, or slowest motion, 11. Degrees, 17. minutes, 10. seconds in her middle motion, shee goeth 13. Degrees, 10. minutes, and 36. seconds, in 24. houres. By occasion of this diuersity of the Moones motion, the vulgar bee also much deceived. First, that say, the Moone for three dayes next after she is changed, keepe her selfe close as a Queene, (that is, that shee cannot be seene) which is false. And that for three causes, whereof one I will shew you, the rest I will omit for breuity. The swiftnesse of the Moones true moouing, for in her swift moouing shee is sooner seene then in her slow moouing, and when all the three causes doe concurre, it is possible that shee may be seene the selfe same day that the change is, and that especially in those places, whose latitude is very farre Northern. But if two of the causes doe concurre, then she may be seene the next day after her conjunction, or change with the Sunn: If there be no more but one cause, then shee is commonly seene the third day after the change. The second error is, that they will point out one certaine day or time for the prime of the Moone, that is as they would haue it, (betwene the change and the fifth day after, which is not true.) The third error is, that the common and old receiued Table to know how long the Moone shineth, and when shee riseth and seteth, her coming to the South: and to know the houre of the night by the shadow of the Moone in any Sunne Diall: and this they say they can doe exactly, which is not true. The fourth error is, that some men (deceiuing themselves) haue reckoned and numbered alwayes by a certaine difference of dayes, to finde out the criticall, iudiciall, or mortall dayes: calling the second and fift (after the instant that the sicke person was sicke or tooke his bed) mortall dayes, the fourth a iudiciall or shewing day, and the 7. and 14. Critica, or criticall dayes, respecting not the motions of the Moone.

An Induction in briefe, to the knowledge of
the necessarie parts of the Sphere, as well
celestiall as materiall.

Mundus, (quem teste Plinio Græci nomine ornamenti κλῆμα, Latini à perfectâ absolutaque elegantia mundum appellarunt) est, qui suo ambitu se & cuncta complectitur, &c.

The world: that is the intire body, which containeth in it all the heavens and elements, with all that in them is. The parts of the world are two especiall, the heavens which are 9, in number, and the elements which are 4, in kinde, which cannot be scene. The order and situation of all these parts, as well elements as heavenly spheres, beginning at the lowest, (which is contrary to nature) and so proceeding to the highest.

Now the spheres are called Heavens, and the Outspread-firmament, &c. That which is nearest unto vs, is called the sphere of the Moone: and the next about it, is the sphere wherein is the starre called Cacob, (or Mercury :) and the third sphere, is that wherein Nogah, (or Venus is: the fourth sphere hath in it the Sunne: the fifth Maadim, (or Mars:) the sixth hath in it the starre Tsedek, (or Jupiter :) the seventh, Shabehi, or Saturne:) the eight sphere is that which hath in it all the fixed starres that are scene in the firmament: the ninth sphere, is that which turneth about every day from the East to the West, and it compasseth all round about, &c. The starres that are all in that one (eight sphere, although they be one above another, yet because the spheres are pure and cleare as Crytall, and as Saphyre & therefore the starres in the eight sphere are scene vnderneath the first sphere, &c. None of the spheres, are either light, or heavy, or coloured, red, or blacke, or of any other colour: and whereas we see them of a blew colour, it is onely to the appearance of the eye, by reason of the bright of the ayre: also they have neither taste nor smell; because these accidents have no place, but in bodies that are beneath them.

Under the Moone are the foure Elements, Fire, Ayre, Water, and Earth. Now the world and all his principall parts are round in forme and shape, as a globe or ball, and the earth is in the middle of the world, as the Center of it: and beareth no view of quantity, in comparison to the world. And for the
C 3 mobility

A Prognostication.

mobility of the earth, it hath no more motion of it selfe then a stone, (but resteth quietly) and so doth the elements except they be forcibly mooued. psal. 104, 5, The Lord layd the foundation of the earth: that it shall neuer mooue at any time. Notwithstanding men, such as Copernicus: and others of his opinion, may spoyle you through Philosophie, and vaine deceit, through the traditions of men, &c. Col. 2. 8. (that would beare vs in hand that the Earth mooueth continually, and the Sunne stands still and mooueth not. Again, the Heauens doe mooue continually from the East to the West, and that motion is called the dayly motion: and it is the measure of the common day. The Moone hath a seuerall motion from the West towards the East, contrary to that moouing of the dayly course, and this motion is the iust measure of a moneth, and euery quarter doth make a weeke. The Sunne and the other Planets also hath a peculiar motion from the West towards the East, which the Sunne doth accomplish in a yeere, and of this course the yeere taketh his measure and quantity.

Eclipses. 1620.

In the hypper face of the Earth, this yeare of grace 1620. There will happen sixe Eclipses of the Luminaries, viz. foure of the Sunne, and two of the Moone: Of which, both of the Moone will appeare vnto vs about our Horizon: for the Sunn hee will be *Sub terra, & non supra centrum Horoscopi*, at the times of his eclipsing, and therefore I say no more of him.

The first Eclipse happening of the Moone, will appeare vnto vs in England the 4, of June, and to them beyond Sea the 14, day of the same. the Moone being not farre from Anabibazon, and this totall Eclipse will appere vnto vs at Darby: in the beginning, about 30, minutes after 10, a clock at night: she will beginne to be totally darkened at 40 minutes after 11, and beginne againe to recouer her borrowed light by little and little at one a clock, and 27, minutes after midnight, and fully recovered her lummyary light againe at 37, minutes after 2, in the morning: The whole duration is 4, houres and 7, minutes; and as the midst of her darknesse shes will bee almost South and by West of the Compasse, from vs at Darby.

The second, and last Eclipse of the Moone, offereth herselfe to vs at Darby, the 29, day of Nouember: (and according to the Gregorian yeare, the 9, day of December, she being in the

Allestree. 1620.

the 19. degree of π neare unto Catabibazon, and this Eclipse will shew it selfe vpon our Horizon vnto vs at Darby, at the beginning, about 3. of the clocke. 33. minutes. 53. seconds, in the afternoon being wednesday. at which time shee will not be vp, or on our Horizon, of one halfe quarter of an houre after, wee may see the midit of it, and the end, but not the beginning. The totall darknesse about 4. a clock and 39. minutes, shee will beginne by a little and a little about 12. minutes after 6. a clocke, to recouer her borrowed light and will be free from all her obscuration about 16. minutes after 6. at night Note that shee beginneth to be Eclipsed on the East side of her body, and endeth on the West side thereof. because of her motion from West to East, (and note also) that at her totall darknesse. shee will be a little more then East North, East from the Meridian of Darby.

Of the foure Humors, and certaine Physicall obseruations.

Quatuor humores in humano corpore constant :

Sanguis cum cholera, flegma, melancholiaque,

Terra melan, aquafleg, et aer sanguis, cholera igni.

Which if they excoede, or alter that proportion that God by nature ordained them to at the first, (either in qualitie or quantitie) then shortly happeneth diseases and sicknesses. Note for Phlebotomy, and purging, when the weather is extreame hot, or cold, it is not then good to purge, or to let blood, vntlesse that some great necessity doe require it. And therefore Hippocrates. part. 6 & 46, Aphorif. saith : that the Spring and Autumne are more conuenient to take Physicke, then Summer & Winter. (And againe, to sing the old tune) I say there is some maturing Physitions, with others more precise then wise) that say, No part of mans body ought to be touched with any Chirurgicall Instrument, or Caustere, actuell or potentiall, at what time the Astronomer or Heathenish Divinificators, Heaven-gazers and Moone-Propheis, Esay 47, 10. saith the Sunne, Moone or Lord of the Ascendant, is in the same imaginari signe, Heathenishly attributed to the parts of mans body, let doyme (by them in the Almanack.) and in so doing the sicke Patient may die for want of opening a vaine, and so B. c. *mupe*, for the

A Prognostication

the Moone abideth two dayes and more in one signe, and the Sunne 30 dayes. In the first and third weekes of the Moone, it is best vsing externall Euacuations, as Phlebotomie, Batches, Cupping, &c. But in the second and fourth weekes of the Moone, internall Euacuations, because the very spirit and life resteth in the blood, for that is the chiefeest humour in mans bodie: for in urinis, sanguis est fundamentum caloris naturalis, in quo calor naturalis confortatur. Therefore it ought not to bee let out, but upon great occasion, and sound aduice of some learned Physician: for otherwise it may make a way to many grievous infirmities. And as concerning letting of blood, (I say againe) if it bee for the Pestilence, Plurisie, Phrenisie, Clouing, for a continuall burning Ague, a continuall or great head ach proceeding of Choller, or superfluous blood: or for any extreame paine caused by heat, choller, or superfluitie of blood. A man (in all these cases) may not tarry for a cholen day of the Amanacke, because the Patient might die in the meane space: but instantaneously with all speed, hee must be let blood, vntill he be very weake, and like to swonne, (whatsoeuer Brener, or any such like can say to the contrary) Concerning old age; you are to understand, that decrepit old age, and young Infants, are vnto to haue Phisicke administered vnto them, or to be let blood. In letting of blood there be many things to be weighed and considered: therefore I would not wish that any man should trust too much to the vnlearn'd Chirurgeon. The fittest time to take purgations (according to Astronomie) are to bee collected according to the motion of the Moone in watte Signes: as in Cancer, Scorpio, and Pisces: and take heede also that the Moone be not in Aries, Taurus, Sagitarie, or Capricorne, or ioyned to any retrograde Planet (in giuing purging medicines) for they cause vomit.

In ♈ in aspect of	{	♀ not combust, is good to anioide Choller ☉ is good to purge Phlegme ♀ good to expell Melancholly	}	with Electu- aries.
----------------------	---	---	---	---------------------------

In ♋ in aspect of	{	♀ good to purge Choller ☉ good to purge Phlegme ♀ good to purge Melancholly	}	with Potions.
----------------------	---	---	---	------------------

In ♊ in aspect of	{	♀ good to purge Choller ☉ good to purge Phlegme ♀ good to purge Melancholly	}	with Dis.
----------------------	---	---	---	--------------

Take

Allestree 2620.

Take vomits, the Moone being in Leo, Taurus, Aries and Capricorne, in putting Choller, let not & be combust.

Take	{	Purge by Aecling, Glsters, Caracacines, Preparatiues, Stop Rhumes and flux,	}	The Moone in	{	S Ω 02 μ . V \triangle μ 02 π . S V 02 ζ . \square \triangle 02 π . σ μ 02 ζ .
------	---	--	---	-----------------	---	--

Good to comfort the ver tue	{	Attractiue, Retentiuue, Digestiue, Erpulsiue,	}	the Moone in	{	Aries, Leo, 02 Sagitari. Taurus, Gemini, Capricorne: Gemini, Libra, Aquari. Cancer, Virgo, Pisces.
--------------------------------------	---	--	---	--------------------	---	---

To enter into Bathes for hot diseases, let the Moone be in μ , Cancer, Pisces: for cold diseases, in Aries, Leo, 02 Sagitari. Those daies in the which the Moone goeth to the Coniunction of Iupiter, are very vnto vsome (saith the Astronemer) to take a Purgation in; but most fit to prouoke vomit, noted in my Almanacke thus & 4 D.

An Unguent or Plaster is best applied, when the Moone is in that Signe which governeth the member whereunto it is appliable

And to conclude.

*Si tibi deficiunt medici, medici tibi fiant,
 Hac tria, meus leta, requies, moderata dieta.*

Use three Physitians skill, first Doctor Quiet,
 Next Doctor Meriman, and Doctor Dyer.

**Times, or generall rules of Husbandry,
 and Gardening, superstitiously attributed to
 the Moon in the 12, Signes of the Zodiaque.**

First, before you plant or graffe, &c. consider the winde; for if it be in the North or East, it is verrillous: for Septentrio cum suis est frigidus et siccus existans fulgura et niuis pellens pluias,
&c.

A Prognostication

&c. The moones considered, Sow, Plant, and Graffe, &c. canst;
 Being sic seasons, the Moone in Taurus, Virgo, Capric. and Pisces.
 Good to sow all kinde of Corne, when the Moone is in Can-
 cer. Good to graffe, when the Moone is in Aquarius, in the in-
 crease. Good to cut the haire of the head, for the avoiding of
 baldnesse, in the increase of the Moone. Good to fill timber for
 building, in the wane of the Moone, for the avoiding of worms.
 But to plash hedges, fell wood to burne, that the Rocks may
 the better grow againe, the Moone increasing. Good to geld
 cattell the Moone in Aries, Sagitarie, or Capricorne, in the in-
 crease. Remoone and let your trees in the first quarter, the wea-
 ther being warme and dry; From September untill Februarie,
 set or sow all kinde of seedes, the Moone in Aries, Taurus, Can-
 cer, Virgo, Libra, Capricorne, Aquarius, or Pisces; but the
 seedes whose roots be round, must bee sowne (as Onions, and
 Cabbages, &c.) three or foure dayes before the full. Sow seedes
 for store (or hearbes) in the increase, from February till Iune.
 Cut vines in February, March, or September, the Moone in
 Aries, Libra, or Scorpio. Remoone trees in the same Signes,
 all the last quarter, in November, September, and February.
 Duing your land that weedes may not abound, in the last quar-
 ter. Sheare sheepe in the increase. Kill fat swine at the full
 Moone, for the fat the better induceth the boilling. Gather ap-
 ples, hearbes, and fruit, at the full Moone. Good for oblection
 or weaning of children about the full, the moone vnder of course
 to make them forget the papp, or nurse. Sowe beanes and pea-
 son, about the full moone, but lentiles and fleches in the last
 quarter. Good to destroy cornes, haire, wennes, and warts,
 cut them in the last quarter of the moone: and therein conjunction
 or quartill or opposition with Saturne or Mars, noted in
 my Almanack thus: 4 3 D. 0 3 D. 2 3 D. 4 3 D. 2 3 D. 0 3 D.
 Commit thy way vnto the Lord, and he will direct thee Psal. 37. 5.

Cambridge Commencement-falleth out this
 yeare the fourth day of Iuly, the Vespers vpon
 the Saturday next before. Oxford Act happe-
 neth vpon the tenth day of Iuly, the Vespers vp-
 on the Saturday immediately before.

The vse of the aforesaid Tide-table with a Caution.

I was requested to write this Tide-table, I thinke rather for the old custome of the same, then for its utility: for there bee yett more ingenious and profitable. Therefore obserue in the seauenth Columnne of this my Almanacke, the houres and minutes of full-sea at London bridge, oner against each severall day of the Moneth, to or from which time there noted Adde or Subtract such houres and minutes as this Table above or precedent doth appoint. the totall

A Prognostication.

of the one, or remainder of the other, shall be the time of full sea at any of these places before going. Note that Accessum & recessum saepe ventorum impetus in vestro mari impedit, & in quamvis partem undas rapit. Traditorium etiam hanc motum littorum impedienda faciunt: hinc fit, vt maritimi citius percipiant, quam qui interiora loca habitant.

The vse of this Table is so common,
it needeth no Example.

Of the time of the comming to our Meridian, or South of the Planets, and of diuers of the fixed Starres, most easie to be knowne, shewing also how six of the Planets with the Dragons head are placed in the 12. Signes of the *Zodiaque*, at noone: For the first, and 15. day of euery moneth this yeere. I haue here set downe their Meridian being, for the first day of euery moneth: but to know the time for euery day, all these Starres except Saturne, and Iupiter, doe come to the South sooner by an houre in fifteene dayes: and foure minutes in one day, whereby you may readily find when any of them are in rule for obseruation.

Curteous Reader, I haue set downe these Stars for good purpose, for by knowing their being vpon the Meridian. you may know the houre of the night: and many things for obseruation; with other excellent, pleasant, and profitable vties, fit for Schollers, Gentlemen, Physitions, and Mariners. But if you would know the time, for euery day in the moneth you are to substract foure minutes for euery day, or an houre for euery fiftene dayes. from the houres and minutes found in these tables, and you shall haue your desire. And so I end vnto the next yeare

Trini-vni Deo gloria.

God saue our gracious King *James.*
